DETAILED ACTION

Acknowledgment of Papers Received: Amendment dated 3/23/05.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-18 of U.S. Patent No. 6,605,293. Although the conflicting claims are not identical, they are not patentably distinct from each other because the amended claims recite limitations further defining an outer layer and an inner core. The claims also recite that the outer layer has selected portions that are uncoated. However it is the position of the examiner that these differences do not represent patentable distinctions. The coating step of the '293 patent results in at least one infusion channel, just as the coating step of the newly amended claims. Burden is shifted to applicant to provide how leaving selected areas uncoated produces a patentably distinct, non-obvious invention when the resulting products are identical, and are used for the same purpose. It is well within the level of skill in the art to coat an implant to their desired specifications, as long as the function of the implant is maintained. For these reasons at least the claims are rejected as obvious variants of a previously patented invention.

Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kelly et al (USPN 5,676,745) discloses polymeric implants comprising bioglass, where the implants are sintered. Ballintyn et al (USPN 4,351,069) discloses porous implant materials where the implants are sintered. Ducheyen et al (USPN 5,591,543) discloses implantable devices comprising bioglass and biologically active agents.

2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
